MM5130 – DC to 26 GHz High Power RF Switch

Product Overview

Description:

The MM5130 device is a high-power SP4T micro-mechanical switch offered by Menlo Micro. Menlo Micro has developed a new Ideal Switch™ fabrication process and applied it to DC and wideband RF/microwave switch applications. This innovative technology enables highly reliable switches capable of greater than 25 W forward power. The MM5130 provides ultra-low insertion loss and superior linearity as an SP4T from DC to 18 GHz, with greater than 3.0×10^9 switching cycles. The MM5130 can also be configured in super-port mode to extend the max frequency to 26GHz. The MM5130 is an ideal solution for replacing large RF electromechanical relays, as well as RF/microwave solid-state switches in applications where linearity and insertion loss are critical parameters. The four switch channels are individually controllable by applying a gate voltage to the corresponding RF GATE pin.

Features:

- DC to 26 GHz Frequency Range
- 25 W (CW), 150 W (Pulsed) Max Power Handling
- Low On-State Insertion Loss: 0.4 dB @ 6.0 GHz
- High Linearity, IIP3 > 85 dBm
- 25 dB Isolation @ 6.0 GHz
- High Reliability > 3.0×10^9 Switching Operations
- 2.5 mm x 2.5 mm WLCSP Package

Applications:

- Switched Filter Banks and Tunable Filters
- High Power RF Front Ends
- Antenna Tuning
- Low-Loss Switch Matrices & EM Relay Replacement

Markets:

- Defense and Aerospace
- Medical Equipment
- Test and Measurement Systems
- Wireless Infrastructure

Operating Characteristics

Absolute Maximum Ratings

Exceeding the maximum ratings as listed in Table 1 below may reduce the reliability of the device or cause permanent damage. Operation of the MM5130 should be restricted to the limits indicated in Table 2 recommended operating conditions listed below.

Electrostatic Discharge (ESD) Safeguards

The MM5130 is a Class 0 ESD device. When handling the MM5130, observe precautions as with any other ESD sensitive device. Do not exceed the voltage ratings specified in Table 1 below.

Table 1 Absolute Maximum Ratings ¹

Parameter	Minimum	Maximum	Unit
CW Input Power @ 6 GHz		25	W
Peak Input Power @ 6 GHz		150	W
Open State Voltage Rating / Switch RF1-4 to RFC ²		+/-150	V
Open State Voltage RF1-RF4, RFC to GND, GATE pin to GND Potential ²		+/-150	V
DC Voltage RFGATE Pins to RF1-RF4, RFC, GND ⁽²⁾		+/-100	V
DC Current Rating / Switch		500	mA
Hot Switching Current @ 0.5 V		10	mA
Operating Temperature Range	-40	+85	°C
Storage Temperature Range	-65	+150	°C

¹ All parameters must be within recommended operating conditions. Maximum DC and RF power can only be applied during the on-state condition (cold-switched condition).

² This also applies to ESD events. This is a Class 0 device.

⁶ Measured at 1.0 GHz and 2.0 GHz fundamental frequency and 35 dBm input power.

⁷ Measured at 1.0 GHz and 2.0 GHz fundamental frequency and 35 dBm input power.

⁸ Includes any actuator bounce, and measured with 20 V/us slew rate GATE pin voltage.

⁹ Switch settling time measured from 50% VGATE to settling to within 0.05 dB of final value.

¹⁰ Measured at 5kHz cycling rate.

¹¹ Performed with 1 MΩ termination.

Normal SP4T Mode

The MM5130 is normally configured as a SP4T, with input on the RFC channel. The RFC is then routed to one of the 4 outputs by biasing the desired RFxGATE pin.

Normal SP4T Mode Block Diagram

Super-port Mode

The MM5130 provides for an alternate connection method which can provide enhanced performance for certain RF parameters. This configuration is called super-port. It consists of bypassing the RFC input port and using the remaining 4 channels as a symmetrically oriented SP3T (or SPST or SPDT if preferred). In this manner, any one of the RF1, RF2, RF3, RF4 channels can be connected to any other channel by biasing both desired channels. When operating in super-port mode, slight improvements in RF isolation and return loss can be achieved. Please refer to the “Recommended PCB Layout” section with instructions on how to optimize the PCB layout for super-port mode.

Recommended PCB Layout

Layout recommendation for connecting the MM5130 with coplanar RF line or grounded coplanar line as used for the MM5130 evaluation board.

For the coplanar RF lines, it is recommended to taper the line to fit the 150 μm recommended landing pad while keeping the spacing to the ground metal constant and identical to the spacing used for the line.

In those two examples (Normal SP4T Mode and Super-Port Mode) a 4.0 mil/0.10 mm spacing is used. Recommended maximum solder resist thickness 20 μm . Routing of the gate control lines is not critical for RF performance.

Recommended Solder Reflow Profile

For detailed information on soldering the MM5130, please refer to application note: “WL-FC Assembly Instructions”

- A ROHS compliant Solder Alloy used is SAC alloy: 96.5% Sn, 3.0%Ag, 0.5%Cu. These are the nominal percentages of the components. This alloy is designed to replace SnPb solders to eliminate Lead (Pb) from the process, requiring a higher reflow temperature. Moisture resistance performance may be impacted if not using the Pb-Free reflow conditions.
